Results-driven Fullstack Developer with 1.5+ years of experience delivering 7 software projects, including a real-time WebSocket-based digital scoring system, alongside 20+ backend modules and 30+ production-ready UI features. Skilled in modern web technologies (ReactJS, NextJS, Laravel, NodeJS, Golang) and enterprise-level DevOps tools (Kubernetes, Elastic APM, Elasticsearch, OpenTelemetry). Experienced in implementing monitoring, observability, structured logging, and real-time communication systems for production environments. Proven ability to build scalable, efficient solutions across full-stack development.

WORK EXPERIENCE

CV. Solusi Teknologi Kreatif (Full Time)

South Jakarta

Fullstack Developer

January 2025 – September 2026

- Contributed to the development of approximately **7 software projects**, including a **multi-portal platform** (Developer Portal, Publisher Portal, and Admin Portal), delivering end-to-end solutions across frontend and backend systems.
- Implemented application **monitoring and observability** using **Elastic APM**, **Elasticsearch**, and **Kibana** to monitor application performance and logs, enabling proactive issue detection and system optimization.
- Implemented **structured logging** using library NodeJS (**Pino**) and **OpenTelemetry** in a **Kubernetes**-based environment, where logs were collected via **Filebeat** and shipped to Elasticsearch for centralized logging and analysis.
- Developed a keyword-based social media data scraping system using RapidAPI to automate data collection and analysis workflows.
- Collaborated with UI/UX designers to implement responsive and **production-ready** interfaces based on Figma mockups using **ReactJS**, **NextJS**, **InertiaJS**, **Laravel**, and **Tailwind CSS**, including redesigned user management modules and **30+ new UI features**.
- Developed **20+ backend modules** for CRUD operations involving relational tables using **Laravel**, **Inertia.js**, and **NestJS** ensuring data integrity and system scalability.
- Built CRUD backend services in Golang and implemented corresponding frontend integration for SIPD, a government regional planning and budgeting system, as part of a cross-functional development team.
- Fixed **30+ frontend bugs** and UI issues to enhance performance and user experience.
- Implemented WebSocket-based real-time communication for a multi-role digital scoring system, enabling synchronized score input and live data sync across five concurrent roles (judge panel, match chairman, referee, timer, and operator) during pencak silat matches.
- Designed and implemented an ESP32-based IoT system with push button and LED as a coach protest button feature for pencak silat (martial arts) matches, integrated via REST API with a digital scoring system displayed in real-time to the referee panel.
- Configured Zigbee-based IoT integration for a smart home system (switch control) for a government institution, integrated with Home Assistant for centralized control and monitoring.

INTERN AND PROJECT EXPERIENCE

Bachelor's Final Project

Padang & Solok

Computer Engineering

February 2024 – August 2024

- Designed and built an **automated IoT-based system** for monitoring soil pH, irrigation, and fungicide spraying on tomato plants.
- Integrated multiple sensors (Soil Moisture, pH Meter, DHT22) and Actuators (ESP32, Solenoid Valves, Water Pump) using programming logic.

- Developed a remote monitoring app using **Blynk** with real-time notifications and remote control features.
- Programmed ESP32 using **Arduino IDE** to ensure seamless sensor integration and reliable system performance.
- Conducted **ROI** (*Return on Investment*) and **NPV** (*Net Present Value*) analysis for project feasibility.

West Sumatra Provincial Department of Communication, Information, and Statistics

Padang

IT Security Intern (Informatics Applications Division)

January 2023 – February 2023

- Conducted network and website security analysis using **NMAP** and **Acunetix Web Vulnerability Scanner** to detect system vulnerabilities.
- Interpreted and documented scan results to identify potential threats and provide mitigation insights.
- Analyzed server infrastructure and network systems to understand real-world public sector IT operations.

TECHNICAL SKILL

Frontend Development:

- Frameworks & Libraries: ReactJS, NextJS, InertiaJS
- Styling: Tailwind CSS, CSS3, HTML5, Responsive Design, Bootstrap
- State Management: React Query, Context API
- UI/UX Implementation: Figma mockups, Component-based architecture

Backend Development:

- Languages: JavaScript (NodeJS), Typescript, Golang, PHP, Python, C++
- Frameworks: NestJS, Laravel, Express.js
- API Development: RESTful API (40+ endpoints developed)
- Core Competencies: CRUD operations, Business logic, Authentication

Database Management:

- Relational Databases: PostgreSQL, MySQL, SQLite
- NoSQL: MongoDB
- Search Engine: Elasticsearch
- Skills: Complex queries, Data migrations, Database optimization

DevOps & Monitoring:

- Containerization: Kubernetes
- Monitoring & Observability: Elastic APM, Kibana
- Logging: Pino, OpenTelemetry, Filebeat
- Performance: Application monitoring, Centralized logging

IoT & Embedded Systems:

- Microcontrollers: ESP32, Arduino (Arduino IDE)
- Sensors & Actuators: Soil Moisture, pH Meter, DHT22, Solenoid Valves
- Platforms: Blynk (Real-time monitoring)

Development tools & Practices:

- Version Control: Git, Gitea, GitHub
- Development Environment: VS Code, Postman
- API Testing: RapidAPI
- Methodologies: Agile development, Code maintainability
